

Defender for Cloud

Enable protection against modern threats across multicloud and hybrid environments

The Challenge

Maintaining comprehensive cybersecurity in an increasingly cloud-based, digital workspace. Detecting threats, mitigating risk, and ensuring compliance becomes increasingly difficult as business modernizes.

Enhanced Security

AI algorithms detect and mitigate potential risks, providing protection for your cloud resources, data, and applications.

Streamlined Compliance

Provides actionable recommendations to any compliance gaps, making it easier to stay compliant and avoid penalties.

Unified Management

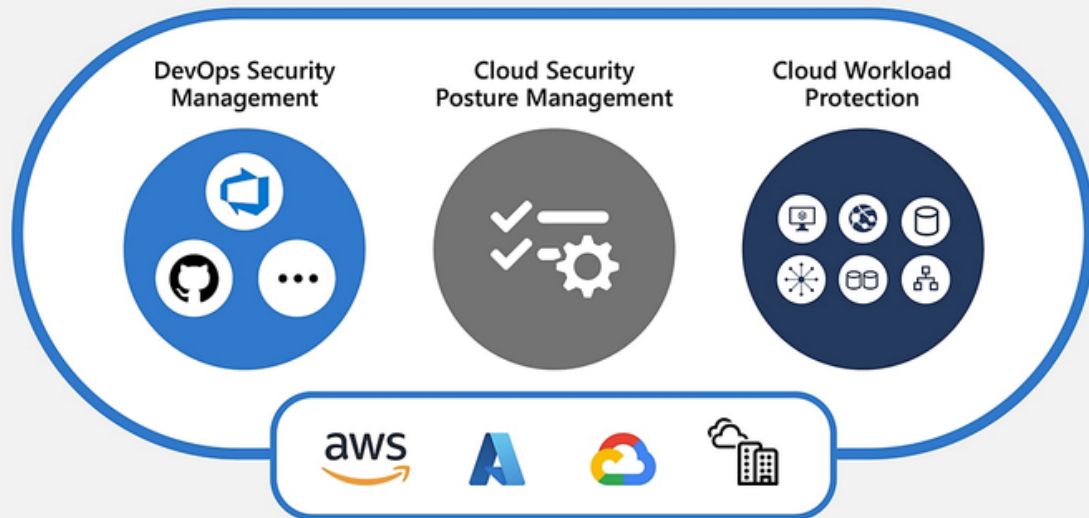

Centralized dashboard that integrates with other Microsoft products and offers a unified view of your security posture.

Microsoft Defender for Cloud

Objectives

Harden and manage your multicloud and hybrid security posture, detect threats and protect your workloads, and respond and automate remediation to recommendations.

Considerations

We want to understand your business operations as they exist in a hybrid or multicloud environment, and help you protect your workloads while maintaining compliance.

Our Implementation Approach (3-5 weeks)

- Define your project scope
- Collaborative planning & design sessions
- Gather business requirements
- Provision Defender for Cloud services
- Analyze existing resource types
- Deploy compliance benchmarks
- Define roles and responsibilities
- Enable advanced protection plans
- Configure CSPM and CWPP
- Provide guidance and recommendations
- Knowledge transfer and know-how
- Advanced cloud security roadmap strategy
